

AFT Fathom™

Add-on Modules

Goal Seek & Control

Vary input parameters that yield desired output values and simulates control functions

Automated Network Sizing

Automatically size piping to minimize weight and cost

Settling Slurry

Model the effects of pumping fluids containing settling solids using the Wilson/GIW method

Extended Time Simulation

Models dynamic system behavior and how critical system parameters vary over time

Automated Network Sizing ANS Module

Benefits

- Size your piping network as an integrated system to ensure you find better design combinations
- Manage your iterations, enabling efficient comparison of more design concepts.
- Use design cases to size a system while anticipating different operating requirements or future expansions.
- Perform economic analysis without opening another program.

Capabilities

- Apply design objectives to minimize system costs including pipe weight, duct volume, and monetary cost
- Specify design requirements such as pressures, flowrates, velocities and NPSH throughout a system
- Size a system for multiple operating conditions, meeting design requirements using dependent design cases

Table Units	Material	Installation	Operation/Energy	TOTAL
U.S. Dollars (Thousands)				5,079.9
TOTAL OF ALL MODEL COSTS				
Total of All Show Costs	572.9	288.1	4,218.8	5,079.9
Items Not in Sizing	0.0	0.0	0.0	0.0
Pipe Subtotal				
	524.8	270.4	0.0	795.2
P1	87.9	40.5	0.0	128.5
P2	24.8	15.2	0.0	39.9
P3	8.2	3.8	0.0	12.0

Name	Parameter	Location	Max/Min	Value	Units
1	Minimum Condenser Flow	Volumetric Flow Rate	N/A	Minimum	15000 gal/min
2	Minimum LO Cooler Flow	Volumetric Flow Rate	N/A	Minimum	700 gal/min

Apply	Goal Type	Object Type	Goal Parameter	Criteria	Goal Value	Goal Units	Object ID	Object Location
<input checked="" type="checkbox"/>	Point	Pipe	Temperature	=	125	deg F	P26 (Pipe)	Inlet

Apply	Object Type	Junction Type	Object Number and Name	Variable Parameter	Link To	Lower Bound (Optional)	Upper Bound (Optional)
<input checked="" type="checkbox"/>	Junction	Three Way Valve	J28 (Three Way Valve)	Open Percentage	(None)	0	100

Goal Seek & Control GSC Module

Benefits

- Evaluate the effects of changing system parameters
- Save time by avoiding manual iterative analyses
- Simulate control system behavior

Capabilities

- Define multiple variables and goals at multiple locations
- Define goals as single point, differential or sum
- Calibrate models by automatically adjusting pipe friction and scaling to match measured data
- Modeling parameters for variables or goals include
 - Control valves - setpoint, open percent
 - Pumps - speed, flow, head rise
 - Valves - open percent, Cv/K, delta P, flow
 - Reservoirs - pressure, temperature
 - Orifice - diameter, area
 - Heat exchangers - heat rate, temperatures, area, U value
 - Spray discharge - area, K value, discharge coefficient, exit pressure

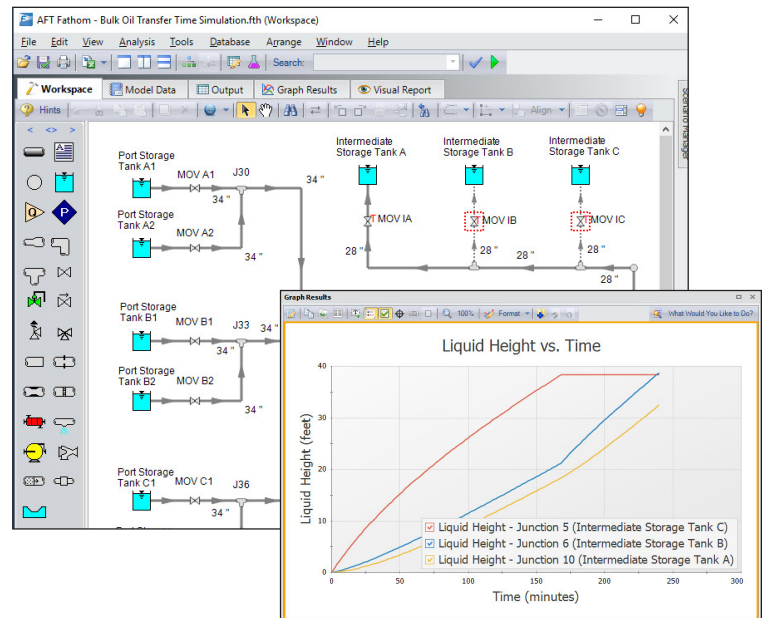

Extended Time Simulation XTS Module

Benefits

- Understand how critical system parameters vary over time
- Automatically change variables for a dynamic simulation of your system

Capabilities

- Define a wide range of actions to occur during the time simulation including:
 - Tank volume and liquid level tracking
 - Pump start/stop and speed variation
 - Valve position changes
 - Control valve setpoint variation
- Text and graphical output
- Unique animation feature dynamically displays time varying parameters along selected flow paths

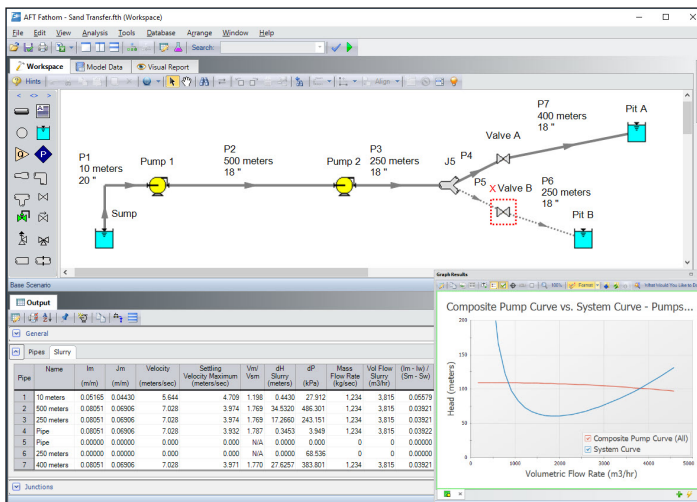

Settling Slurries SSL Module

Benefits

- Consider additional losses associated with slurry flow
- De-rate pumps for accurate modeling
- Determine whether solids will settle out of solution and acceptable margin

Capabilities

- Solutions from the leading Wilson/GIW method
- Shareable database of solid particle properties
- Slurry pump de-rating using Warman or ANSI/HI methods
- Produces output reports with settling velocity, slurry volume/mass flows and other slurry parameters
- Generates slurry systems curves critical to understanding system velocity limits

World Class Support

Your software includes one free year of product upgrades and technical support. Additionally, AFT offers a variety of training for all levels of knowledge.

Training Seminars

This classroom style setting teaches you how to be an AFT analysis and simulation expert.

Free Webinars

Hosted & recorded webinars talk about products and solutions-based uses.

Flow Expert Package

Utilize our experts to help you with projects or simply supply expert analysis.

Tips & Tricks

Each month, an AFT engineer gives newsletter readers tips & tricks to keep you up to date.
